

PHASE 3 – Project Design

1. Architecture

PocketSmart AI consists of:

- Frontend
- Backend
- Gemini AI
- Recommendation/data layer
- Authentication and session layer

2. Frontend

- The frontend collects user budgets, preferences and optional images and displays recommendations.

3. Backend

- The backend manages requests, routing, sessions and communication with Gemini.

4. AI Layer

- Gemini 1.5 Flash Pro processes user information and generates recommendations.

5. Main Routes

- /generate-home
- /generate-party
- /generate-jewelry
- /login
- /register
- /logout
- /token
- /session-info
- /session-data

6. User Flow

- User → Select Category → Enter Budget & Preferences → AI Processing → Recommendations → Display Results
