

PHASE 5 – PROJECT DEVELOPMENT

1. Development Objective

- The objective is to develop a working GenAI-based budget and recommendation assistant.

2. Gemini Integration

- Gemini AI is integrated to generate personalized recommendations based on user requirements.

3. Backend Development

- The backend handles user requests, processes input data, communicates with the AI model, and returns recommendations.

4. Recommendation Routes

- The project includes recommendation routes for:
- Home Interior
- Party Planning
- Jewelry

5. Frontend Development

- The frontend provides input forms and recommendation pages for different planning scenarios.

6. Development Output

- The PocketSmart AI application was developed and run in the development environment. The application provides a recommendation output based on user-provided requirements.

Home Interior Recommendations

Budget: 5000.0 | **Functionality:** Modern Interior

1. Modern minimalist layout with smart space-saving furniture.
2. Warm ambient lighting to enhance room aesthetics.
