

PHASE 8 – PROJECT DEMONSTRATION

1. Project Introduction

- PocketSmart AI is a smart budget and recommendation assistant that uses Generative AI to provide personalized recommendations.

2. Project Purpose

- The purpose of the project is to help users make suitable decisions according to their budget and requirements.

3. Demo Flow

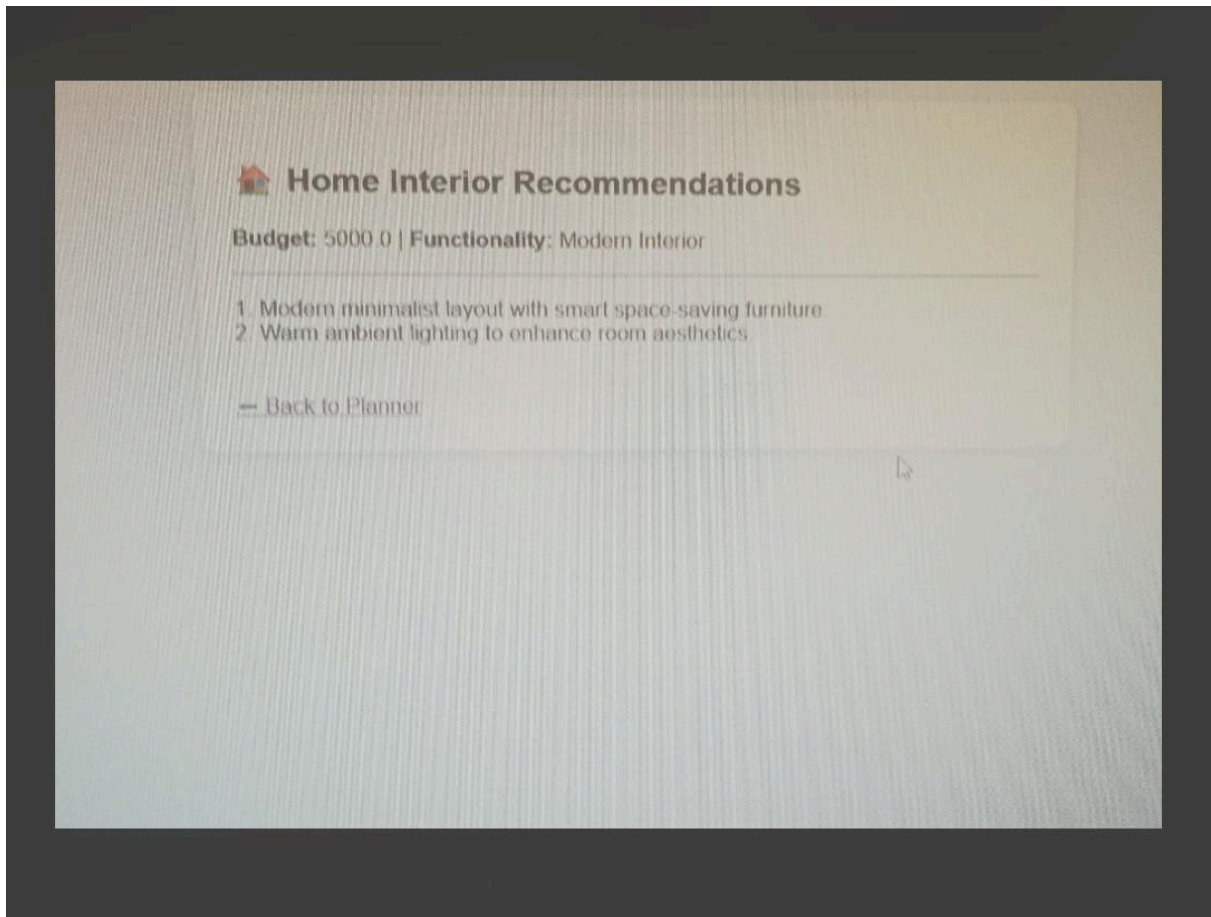

- Open the application
- Select the required planner
- Enter budget and requirements
- Submit the details
- AI processes the request
- Recommendation is displayed

4. Benefits

- Budget-friendly suggestions
- Personalized recommendations
- Easy-to-use interface
- AI-powered decision support
- Multiple planning scenarios

5. Demo Evidence

- The working application will be demonstrated through a screen-recorded demo video showing the project workflow and recommendation output.

6. Final Conclusion

- PocketSmart AI demonstrates how Generative AI can be used to provide personalized, budget-based recommendations for different real-world planning needs.
